

Revolutionary Spa Cover & Lifter!

VacuSeal®

Designed and Manufactured in the USA

the VacuSeal System is changing how we use our hot tub. This patented design is the only cover that opens internally in just one simple motion. The cover and lifter combination reduces the cost of operation, extends the life of your cover, and makes its removal and replacement effortless. It also provides added safety and convenience, along with enhancing your view while you enjoy your hot tub. Plus, the VacuSeal Cover is the only one that can easily be converted into a canopy.

So if you're buying a new hot tub or simply replacing your existing cover, the VacuSeal System not only pays for itself, but will also improve your spa experience.

SAVES YOU Money

This patented design uses an independent bottom hinge that allows each side to tightly fit together. This helps prevent loss of heat by creating a full perimeter seal onto the coping of your hot tub.

The VacuSeal Lifter and Cover work together to vacuum seal the cover to your hot tub's coping; significantly reducing operating costs, helping prevent water evaporation and assisting in keeping your water chemistry in balance.

PROBLEMS WITH TRADITIONAL COVERS

Traditional covers require a wide space at the center where most of the heat is lost. More expensive covers (as shown) actually install a spacer, which helps, but doesn't correct the problem. Competitive pneumatic lifters pull up on the cover increasing the heat loss along with limiting the life of your cover.

The VacuSeal Lifter provides dual pneumatic gas pistons each assisted by our "Reverse Pneumatic Technology (RPT)." The pistons assist in the initial removal of the cover and once it's half way up RPT takes over and does all the work. This reverse technology then assists you upon closing the cover along with gently applying a downward pressure; keeping the cover sealed to the spa's coping and saving you money every day.

EASIEST to Use

The only cover requiring just One Simple Motion with a variety of easy choices!

Two Ways to Open

FRONT OPENING – Raise the center handle and gently push the cover towards the rear of the spa and let go. THAT'S IT!

SIDE OPENING – Raise the cover by the side handles or with one handle and the lifting arm, then push back and let go.

Two Ways to Close

INTERIOR CLOSING – Grab center handle of the cover and pull the cover closed as you exit. SIMPLE & QUICK!

SIDE CLOSING – Grab the cover handle and pull the cover closed or grab the handle and use your body weight to assist.

Traditional lifters require you to first fold the cover in half (the most difficult procedure) without any lifter assistance.

Best Built Cover

All covers may look the same but the quality is quite different!

The interior foam core is constructed of the highest grade virgin foam (no regrind) that contains no CFC's or HFC's and is imbedded with galvanized steel to help withstand the weight of extreme inclement weather. It is then sealed utilizing the highest state-of-the-art equipment available with a specially formulated plastic that is nearly twice the thickness used by competitors.

Every VacuSeal Cover is custom built to fit your hot tub. And you can also choose the color and the fabric of the exterior skin. Our standard marine grade vinyl is unlike most of our competitors because we use expensive plasticizers to preserve the look, feel, and durability of the cover. Available in 10 colors.

To enhance the look of your hot tub or simply lessen the ease of handling,

Sunbrella is the perfect upgrade. This stylish fabric is approximately half the weight of vinyl along with being more durable and easier to clean.

Available in 4 colors.

Additional Benefits

TOWEL & ROBE HOLDER

The side lifting handle doubles as the most convenient location to hang your towel or robe.

IDEAL FOR SWIM SPAS

Large swim spas require two independent covers. The VacuSeal returns each cover to its original position and our patented Swim Spa design presses each cover firmly together **without requiring you to do anything**. The result is heat savings and protection to your spa's water chemistry from debris and rain water.

Traditional covers require you to walk around and reposition both covers after each usage. This burdensome task is even more difficult if access is not available to all sides.

Best Built Lifter

The life of a product is determined by its design and construction.

The weight of the VacuSeal lifter (47 lbs) is 3 times that of our worthy competitors (15 to 19 lbs) but is designed to be easier to lift. Constructed of galvanized steel with a baked on anodized coating also makes it both durable and attractive.

To protect and extend the life of the cover we've designed a patented clamping device for raising and lowering your cover.

A rear arm snugly fits into a custom sleeve on our cover then is attached to a patent pending sliding bracket. This provides smooth and uniform operation and assures that the cover returns to its exact original position upon each closure.

IMPROVES THE VIEW WHILE YOU ENJOY YOUR SPA

VACUSEAL COVER

The only cover where the bather faces the attractive exterior side that is not exposed to the chemically treated water.

TRADITIONAL COVER

Traditional covers have you face the interior side that within months becomes stained and discolored from chemical fumes and ozone.

CONVERTS TO A CANOPY

For those seeking protection from the sun, or would like to use their spa in the rain or snow, or simply want a little more privacy, the VacuSeal easily converts to a canopy. To install simply lift one side of the cover and attach our optional support arm (requires no screws or bolts) and within seconds nearly 50% of your spa is covered.

The VacuSeal Trademark along with US Patent Nos. 8,468,617, 8,479,325, 8,516,625, and 8,516,626, plus other US & Foreign Patents Pending are owned by Hot Tub Products LLC.
