

SpaEase™ Safety Rails

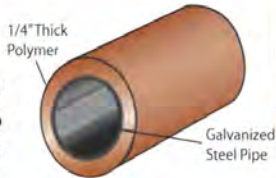

For Hot Tubs & Spas

Manufactured in the USA for over 30 years this unique construction of safety rails has been installed in luxury hotel chains and resorts, including Disney World in Florida. These customers demand high quality products that retain their appearance, provide customer safety, and are environmentally friendly.

Our #1 Priority: Safety

SLIP RESISTANT

Our galvanized steel tube interior is covered with a thick 1/4" non-porous polymer exterior that does not absorb water making it slip resistant and safer to use.

NO GROUNDING REQUIRED

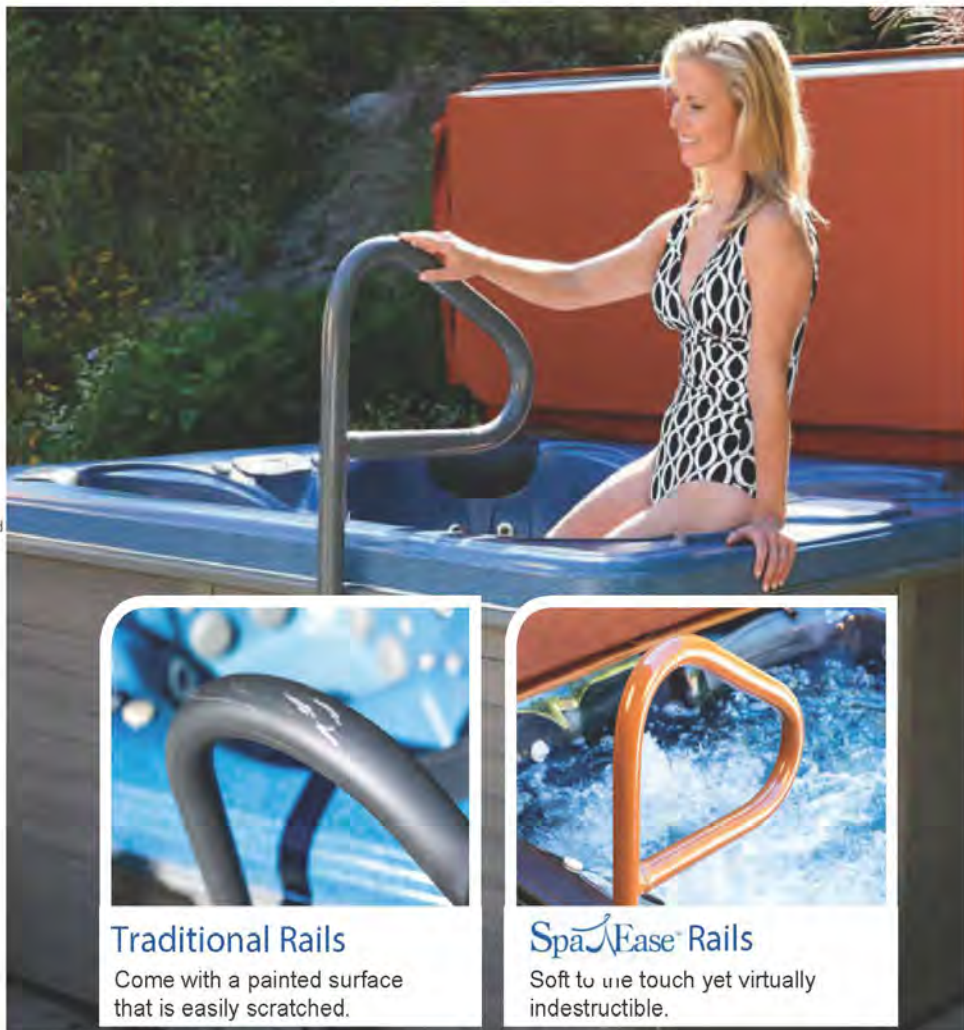

But most importantly the SpaEase rail protects the user from any electrical current and is the only spa rail with a no grounding requirement. Making it not only the safest rail on the market but the least expensive and easiest to install.

Cool to the Touch

Our unique 1/4" thick polymer exterior remains cool to the touch making SpaEase the best choice for hot tubs located in sunny outdoor environments. And all models are available in a variety of designer colors allowing you to match virtually any exterior spa cabinet or cover.

Beauty That Lasts

The elegant look and silky feel of SpaEase Rails is far superior to all other brands on the market. All SpaEase Rails come with a ten year warranty that guarantees they will not fade, discolor, rust, pit, or scale no matter what the climate exposure.

Traditional Rails

Come with a painted surface that is easily scratched.

SpaEase Rails

Soft to the touch yet virtually indestructible.

Environmentally Friendly

SpaEase Safety Rails are the only ones that have been given the "A Greener Product LLC certification Seal" confirming that it complies with the LEED and NAHB and may earn credits that contribute to the certification under green building standards

The Best Choice for You

Side Mount Series

The SM-36 Side Mount Series can be installed on any size Portable Hot Tub or Swim Spa. It includes two mounting locations for added structural support. All attachments can be done without removing any cabinet panel.

The end support attractively wraps into the cabinet and the upper support that utilizes a sliding sleeve that can be mounted at any point on the cabinet.

The 18" arm can be turned a full 360 degrees and includes a convenient star knob to lock it in place at any angle.

Deck Mount Series

The SF-54 Deck Mount Series is designed for all portable hot tubs under 40" in height. It includes a mounting base with hardware that attaches to the deck along with an upper support attachment that utilizes a sliding sleeve that can be mounted at any point on the cabinet.

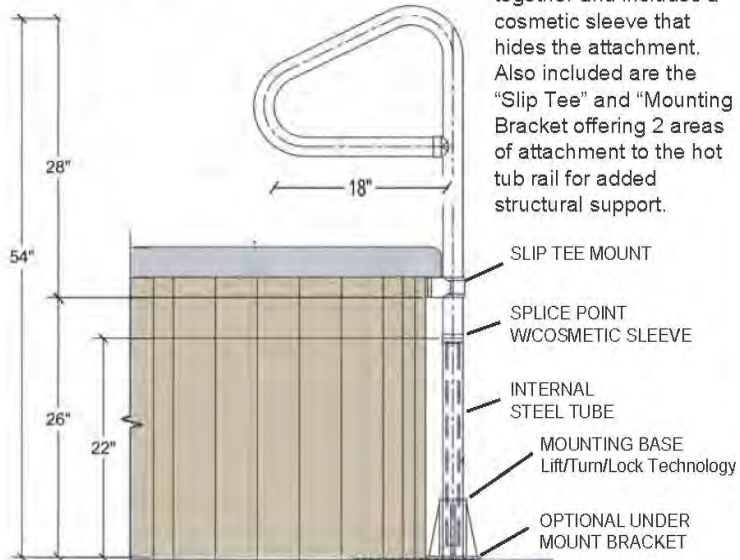

The Mounting Base uses a unique Lift, Turn, & Lock design that eliminates the need of a locking knob. It allows you to slightly lift the rail, turn it 180 degrees and drop it into position. This locks the rail so that it either faces into or away from the spa.

SpaEase Deck Series

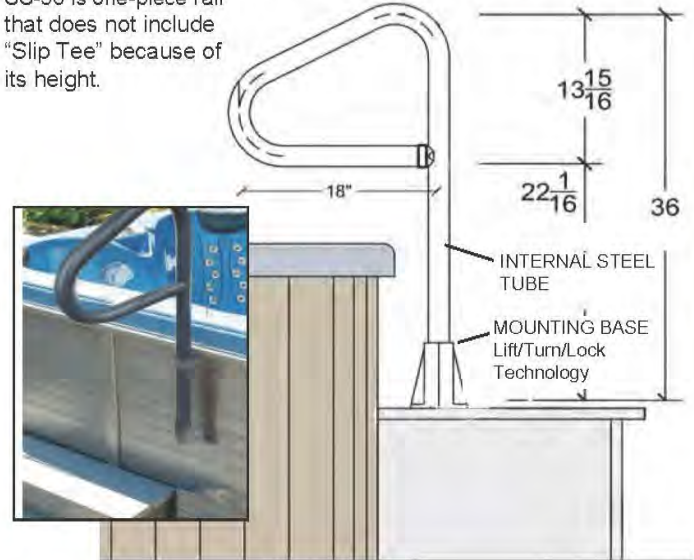

Model SF-54

The lower horizontal portion of the rail sits 40" off the deck making it ideal for most portable hot tubs. The primary rail is shipped in 2 parts that easily attaches together and includes a cosmetic sleeve that hides the attachment. Also included are the "Slip Tee" and "Mounting Bracket" offering 2 areas of attachment to the hot tub rail for added structural support.

Model SS-36

The lower horizontal portion of the rail sits 22" off the deck making it ideal for hot tubs that are partially installed into a deck or patio. The SS-36 is one-piece rail that does not include "Slip Tee" because of its height.

Model UM-54

The UM-54 includes an under-mount steel plate that attaches to the mounting bracket and is designed to slide under the hot tub. This eliminates attachment to the deck for the SF-54 Model by utilizing the weight of spa for bottom support.

Lift - Turn - Lock Technology

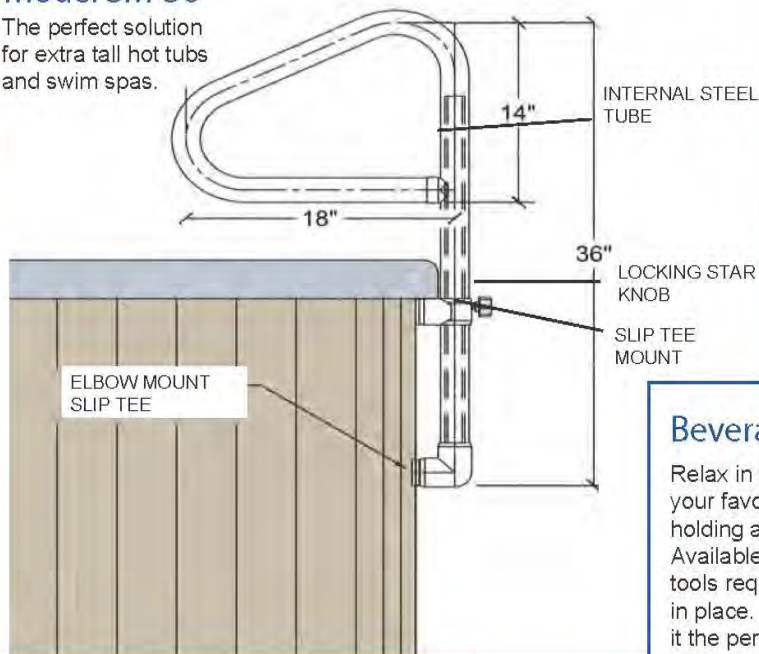

The SpaEase Mounting Bracket allows you to slightly lift the Spa Rail, rotate it 180 degrees and have it lock in place having it either facing into or out of the hot tub. For easy operation apply a lubricant to interior of base. This unique technology is standard on all Deck Series Rails and provides safety along with convenience by eliminating the need for a threaded Star Knob.

SpaEase Side Series

Model SM-36

The perfect solution for extra tall hot tubs and swim spas.

Unique Sliding Slip Tee

The Slip Tee can be installed at any point along the safety rail, though for optimum support recommended is at the highest point on the cabinet. The unique installation design does not require removal of cabinet panel and eliminates the traditional unsightly view of screws and bolts. Included standard on all Models except the SS-36 and comes in matching colors with rail.

Beverage Tray Available

Relax in the comfort of your spa while you enjoy your favorite beverage or snack. Also perfect for holding an ash tray for cigar aficionados. Available for all SpaEase Safety Rail models. No tools required as the tray simply snaps and locks in place. Match with any SpaEase color to make it the perfect accessory.
